Users will be provided a link to connect th

List the top four use cases you plan to support using Messages for Business, and that can drive the highest volume.

Use Case 1

General description

Each morning, for users who have consented to notification delivery, Lindy AI messages the user their daily brief, this includes the day's meetings and top priorities for the user, sometimes with rich links to any document they'll need. The user can configure when this daily alert fires if at all via the Lindy AI web app and can also ask their Lindy AI assistant to do the same. Users can proceed to ask their Lindy AI assistant to execute any actions via their connected accounts.

- ☐ Apple Pay
- ☐ iMessage app
- ☐ Form
- ☐ PDF, image, video, Wallet attachments (Specify)

Use Case 2

General description

Fifteen minutes before a meeting, for users who have consented to notification delivery, Lindy AI sends a reminder to the user about their meeting with some prep they can use during the meeting. Users can configure whether their Lindy AI assistant provides meeting prep or not in the Lindy AI web app and can also ask their Lindy AI assistant to do the same. Users can proceed to ask their Lindy AI assistant to execute any actions via their connected accounts.

- ☐ Apple Pay
- ☐ iMessage app
- ☐ Form
- ☐ PDF, image, video, Wallet attachments (Specify)

Use Case 3

General description

For users who have consented to notification delivery, when the user receives an important email their Lindy AI assistant will proactively message them about the important details from this email and also offer to draft a reply or take actions using their connected accounts. Users can proceed to ask their Lindy AI assistant to execute any actions via their connected accounts.

- ☐ iMessage app
- ☐ Form
- ☐ PDF, image, video, Wallet attachments (Specify)

Use Case 4

General description

Users can ask their Lindy AI assistant to perform actions for them via their connected accounts or various tools at any time. The list of connected accounts and available tools are configured by the user via requests to their Lindy AI assistant. If a user needs to authorize a connected account their Lindy AI assistant will provide them a secure authentication link that opens in the web browser, requires them to login to their Lindy AI account and then proceed to authenticate the connected account. Examples of tools include read email inbox, write email reply, check calendar events, schedule new calendar event, write notion
