Version 1.0 | 31 August 2026

Document metadata

- document: Experience Review package cover note
- version: 1.0
- scope: what is in the package, who reads what, and what you owe back at each step
- audience: everyone involved, once

What this is

Four documents and two Apple forms that take a brand from kickoff to an approved Apple Messages for Business experience. They are designed to be read in order and used at different moments, and there is deliberately no overlap between them. If you find the same rule stated in two places, tell us, because that is a defect rather than emphasis.

What each one is for

#	Document	What it answers	Who reads it	When
0	Package cover note (this document)	Where to start	Everyone, once	First
1	Experience Review Process Overview	Who does what, in what order, and what Apple's pass and fail criteria are	Sponsor, programme manager, everyone once	Kickoff, before any build
2	Conversation Design Standards and Best Practices	Every rule Apple documents, source tagged, plus what we	Conversation designers, product owners, build team	Throughout design and build

#	Document	What it answers	Who reads it	When
		have seen in real reviews		
3	Experience Review Checklist and Test Cases	The evidenced test record you fill in against the live build	Whoever tests, and MA at validation	Steps 2, 3 and 5
4	Brand Experience Review Recording Guide	What the videos must show, and how to make them worth watching	Whoever holds the phone	Steps 4 and 5

Two Apple forms travel with the package as reference documents. They are Apple's own files, used as issued, and Apple asks brands to complete both at the start of the engagement.

Reference document	What it is for	When
Messages for Business Readiness Review	Apple's qualification questionnaire: fit, scale, economics and operating model	Step 1, before scope alignment
Messages for Business Use Cases	Apple's scope form: entry points, features and your top use cases	Step 1

Both are also mirrored as fillable tabs inside Document 3, Appendix A and Appendix B, so the answers sit alongside the tests they govern.

A combined markdown file containing Documents 0, 1, 2 and 4 plus the full test case list is provided alongside them, for teams who want to load the package into their own AI tooling.

The shortest useful path

1. Read Document 1 once, end to end. It is short and it sets every expectation.
2. Complete Apple's two forms. The Use Cases form is the scope agreement for everything that follows, so answer it carefully. Record the same answers in Appendix A of Document 3.
3. Design and build against Document 2. Use the self check at Section 2.18 as you write.
4. Test against Document 3, filling in the Evidence column as you go.
5. Read Document 4 before you film, not after. Pick one primary use case and build the recording around it.
6. Film, then send the videos and the timestamp index to MA.

What you owe back, and when

Step	What we need from you
1	Both Apple forms completed, and confirmation of the use cases and entry points in scope
2	Access to the live experience in your test environment, and confirmation that agents have been briefed
3	Fixes against MA's feedback, until the checklist is clean
4	Confirmation that the scope on the Use Cases form is still current
5	The recordings and the timestamp index
7	Fixes against Apple's feedback, all of them, plus a summary naming each item and how it was resolved
8	A go or no go decision, a follow up with Apple and post launch monitoring on Apple’s and also your side

Ideally we also get access to the test experience before you film, so we can give direct feedback before you commit a day to recording.

Three things that catch everyone

Naming. Apple requires the full name **Apple Messages for Business** and prohibits the abbreviation "AMB". Correct product naming is one of Apple's stated pass criteria, so it applies to conversation copy, interface labels, localisation bundles, marketing, file names you share externally, and anything you say out loud in a recording voiceover. The full table is at Section 2.12 of Document 2.

Scope is a decision, not a default. What you select on Apple's Use Cases form decides which of the 114 test cases apply and what the recordings have to show. Change it after submission and both move with it, so tell us before you film.

The recording is the artifact. Apple never opens your build. They watch what you filmed and judge the channel on that. Document 4 exists because a perfect build filmed carelessly comes back, and so does a beautiful film with a rule broken in shot.

Versions

Document	Version	Date
0. Package cover note	1.0	31 August 2026
1. Experience Review Process Overview	2.1	31 August 2026
2. Conversation Design Standards and Best Practices	2.1	31 August 2026
3. Experience Review Checklist and Test Cases	2.0	31 August 2026
4. Brand Experience Review Recording Guide	1.0	1 September 2026

Standards content is current to Apple's v3.1 documentation of 21 July 2026, the Apple feedback update of 30 July 2026, and the experience items of the integration checklist update of 25 August 2026. Apple's two intake forms predate that documentation, so confirm with your Apple business development contact that you hold the current versions.

Questions on any of this go to Messaging Advisory. We are the single point of contact with Apple for the first brand review.
